

Electronic Data Interchange (EDI)

Simplifying data integration

Managing pre- and post-enrollment EDI connections can be challenging, due to frequent variations between customer and vendor formats. BCI's EDI team is versed in all import/export formats. We provide both standard and custom formatting based on each project's setup and scope of services.

Customer Value

- According to CFO.com, the average cost for a Human Resource department to manually enroll one employee in benefits is \$109.48, compared to \$21.79 using an automated system.
- "Electronic platforms result in a 15 percent time savings for HR" by storing accurate data and automating feeds from one system, according to a study by Towers Watson.
- Total savings of \$19.07 per employee per month can be realized through the accuracy and efficiency of complete automation.¹

Advantages

- Streamlines the transaction process
- Ensures data flow is managed efficiently
- Process is customized to meet requested format and frequency
- Improves consistency and eliminates manual data entry (i.e., errors)
- Transfers measurable metrics to employer's record keeping database
- Assists in the appeals process for employees receiving a Federal subsidy

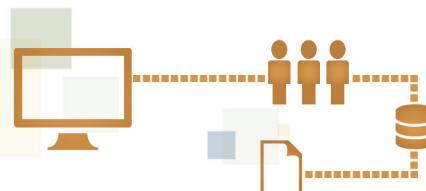

“ 53% of employers implemented a benefits administration/enrollment system in 2012, an increase of 11% over the previous year.”

Delivery Options

- BCI's wholly-owned electronic data management system
- Integration with customer's existing systems
- Integration with third party systems
